[New Attack Bypasses HTTPS Protection On Macs, Windows, And Linux | Ars Technica](#)

The screenshot displays the Virus Scanner application interface. The main window is titled "Virus Scanner" and features a sidebar with sections for Configuration, History, Updates, and Analysis. The Configuration section includes buttons for Settings, Whitelist, Network, and Scheduler. The History section includes buttons for History and Quarantine. The Updates section includes buttons for Update and Update Assistant. The Analysis section includes buttons for Scan a file, Scan a directory, and Analysis. A notification at the bottom of the sidebar states "An update is available".

Overlaid on the main window are two smaller windows. The top window, titled "Possible threats found", displays the following information:

Possible threats found

Files scanned: 3106

Possible threats: 2

A "Close" button is visible in the bottom right corner of this window.

The bottom window, titled "Results", displays a table with the following data:

File	Status	Action Has Been Taken
/home/adam/.config/libreoffice/4/user/basic/Standard PUA.Doc.Tool.LibreOfficeMacro-2	PUA.Doc.Tool.LibreOfficeMacro-2	None
/home/adam/.cache/mozilla/firefox/re029yr6.default/ PUA.Win.Trojan.Xored-1	PUA.Win.Trojan.Xored-1	None

At the bottom of the Results window, there are buttons for Quarantine, Delete, and Analysis, along with a "Close" button.
